- Were you able to find the correct page?
- Did it take longer than necessary?
- Would you return to this website?
- What are your first impressions?

Through this testing you can surface navigation complexity, user enjoyment of browsing the site and other issues. These findings are the foundation of the website's future version (iteration), which will be retested in a process of evaluating and responding to results called the iterative design process.

The iterative design process, at it's core, consists of:

1. Running usability tests;
2. Carefully analyzing the results;
3. Making necessary changes;
4. Repeating the process throughout the design or redesign process.
