# Webinar: Web Accessibility for Legal Aid

In this webinar, presenters Faith Laminack and Allison Carnwath discuss ways to make websites more accessible for individuals with disabilities. Typically when we think of accessibility we consider it within a physical space like ramps for wheelchairs or handicap parking spaces, for example. However, in the age of digital media, it is important that websites are made accessible as well. Laminack and Carnwath provide a variety of examples such as keyboard navigation, text visibility, and video cues for audio to help increase accessibilty. They also provide ways to test your website's accessibility level.

Watch the video below to better understand how to make your website accessible and also how to measure your website's accessibility.
